

What's a Computerized Management System doing in a nickel and dime business like this?

Multiplying Profits.

Every year, millions are made or lost a nickel and dime at a time. Last year in the vending industry, over \$300,000,000 was lost in product shrinkage alone.

If your business is growing, you need computerized cost management from Effective Management Systems. EMS can help you monitor shrinkage, determine the best product selection, and schedule service routes for maximum efficiency.

As innovative experts in vending management, we have the resources to keep your system in tune with inevitable business changes, whatever direction your business takes. Full-line vending, manual food ser-

vice, OCS, CSV, or Music and Games. And as your computer capacity grows, your EMS system keeps pace without expensive software revisions.

Make EMS your single source supplier for software, hardware, service and training. As an authorized Digital Computer Distributor, we offer you hardware from Digital Equipment Corporation, the leading manufacturer of interactive computer systems.

Call Angelo Demetriou at 1-800-558-8727. Because business as usual could nickel and dime you to death.
